Digital Footprint

Every time you go online it leaves a trace behind. This is called your digital footprint. This never really goes away.

Always think before you post anything online and always be kind. Never share personal information with people that you don’t know.

Examples of personal information include:

- name
- address

- telephone number
- photos or videos of you

- credit cards or identity cards

Do not put personal information about yourself in the ‘Bio Section’ of your social media accounts.

How can you keep yourself safe?

Make your devices and apps private so that only your friends and people we know can see your information.

When you make settings ‘private’ you are stopping people that you do not know from seeing your activity, photos, comments or videos.

Turn off your ‘location settings’ so you are not sharing your location with people you don’t know.

Always ask for help from someone if you are not sure how to do this.

Use a strong password. Do not tell other people your password.

Use numbers, letters and symbols. This will make it difficult for people to guess your password. Use different passwords for different accounts.

Always ask someone you trust before sharing any personal information online.
